

FISH FOR THE FUTURE 2024

Fish for the Future is our annual calendar series celebrating the Lakshadweep Islands and their unique and sustainable pole and line tuna fishery. Since 2015, the calendars have highlighted community efforts in monitoring Lakshadweep's fisheries resources and the role that various stakeholders in fisheries can play in resource management. Featuring artwork and photographs amongst other formats, the calendars also celebrate how islanders perceive and experience their fisheries. This year's calendar showcases the **islands and their ecosystem** through the imagination of **thirteen artists from Lakshadweep**.

Notes

25 Christmas Day

Dakshin Foundation is a non-profit organization that works towards natural resource conservation and management while promoting sustainable livelihoods, social development and environmental justice. In Lakshadweep, our work aims to strengthen fisheries co-management by engaging with the local fishing community and other fishery stakeholders. Through stakeholder participation, we hope to increase stewardship as well as provide a platform for policy-making and management.

Dakshin Foundation's community-based fisheries monitoring programme in Lakshadweep was co-created with fishers and began in January 2014 with the intention to involve fishers in knowledge generation and fisheries management. The larger aim of the programme is to strengthen the pole and line fishery to ensure sustainable livelihoods while preserving marine biodiversity. The programme is adapted from time to time to meet the requirements of the community.

Our work in the Lakshadweep Islands is supported by the Lakshadweep Administration, Department of Science and Technology, Department of Fisheries and Department of Environment and Forests. We would like to particularly thank the Lakshadweep fishing community without whom this work would not have been possible.
