

# Seahorses

let's not make this complicated, there are two groups of seahorses

spiny

smooth

Can you believe these dainty sea fairies also face threats?

- habitat loss
- climate change
- illegal wildlife trade for Chinese traditional medicines and curio trade

look at this beauty!

because of presence of chromatophores in their skins, they're masters of camouflage

excellent spies, run underwater detective agencies

only males have a brood pouch and get pregnant

fatherhood for the win

excellent eyesight

I mean, glasses would have slid off that pipe of a nose anyway

long, thin snouts that point down, allowing them to suck food up

When I say sustainable straws, I mean this

no stomach. can't chew food.

upside is they can binge-eat after a heart-break without gaining weight (I'm envious)

poor swimmers. swim upright

Imagine meeting an ex and not being able to swim away fast enough.
